Dr. Chris Fall, DOE
Dr. Michael Griffin, DOD

Dear Drs. Droegemeier, Collins, Córdova, Fall, and Griffin:

As leading science, engineering and international education organizations – representing hundreds of thousands of scientists, engineers and educators around the world – we recognize the need to maintain a balance between an openly collaborative scientific environment and protecting our economic and national security. However, that balance will be compromised if actions are implemented that take an overly broad approach to addressing a critical issue at the forefront today, rather than a more targeted response. Any response should consider the impact on both the overall scientific enterprise and on individual scientists and its development should include the input of the science and engineering community.

Our organizations and members are witnessing an escalating concern among U.S. and international scientists that new policies and procedures under consideration to minimize security risks will have the unintended effect of harming the scientific enterprise. Many scientists—both U.S. citizens and foreign nationals—who properly follow codes of conduct, regulations, policies and laws, may inappropriately be harmed in response to the misconduct and illegal actions of others.

As you know well, for more than half a century, the U.S. has been the undisputed global leader in
